Education

Georgia Institute of Technology Atlanta, GA

B.S. Computer Science, Minor in Psychology | GPA: 3.75 | Highest Honors *Aug 2020 – May 2024*

- Relevant Coursework: Machine Learning, Deep Learning, Reinforcement Learning, Artificial Intelligence, Linear Algebra, Probability and Statistics, Human-Computer Interaction, Cognitive Science

Technical Skills

AI Systems: Claude SDK, MCP, OpenAI API, AWS SageMaker, RAG Pipelines
ML/AI: Python, PyTorch, TensorFlow, LangChain, Hugging Face, NumPy, Pandas
Full Stack: TypeScript, JavaScript, React, Node.js, Express.js, Flask, HTML, CSS
Infra / Cloud: AWS (Lambda, ECS, CDK, DynamoDB, S3, CloudFront, EventBridge), Google Cloud, Git, Linux

Experience

Saleo Alpharetta, GA

AI Engineer *Jun 2025 – Present*

- Architected and led development of an autonomous bug detection and remediation service, now monitoring 25 of the company's largest accounts in production and catching 500+ errors before customers encounter them, replacing a QA cycle that relied on customer-reported issues.
- Built from scratch a cloud sandbox platform that replicates the local engineering environment, where agents write code, run tests, and open PRs. The first agent onboarded, a teammate's implementation agent, now completes ∼50% of product implementation work that previously required direct engineer involvement; the platform is designed to host any agentic workload.
- Primary architect, maintainer, and code reviewer for both production services on AWS (Lambda, ECS, DynamoDB, S3, CloudFront, Secrets Manager), with dedicated frontend, backend, and infrastructure repositories, a shared authentication layer, and interfaces used by engineering, QA, and cross-functional teams.
- **Technologies:** TypeScript, Claude SDK, MCP, AWS

Saleo Alpharetta, GA

Machine Learning Engineer (Contract) *Mar 2025 – Jun 2025*

- Improved semantic code generation quality by 15% over baseline through end-to-end RAG model development, leading R&D efforts across pipeline design, model infrastructure, and evaluation.
- Built a complete benchmarking suite for model testing and deployment, enabling rigorous evaluation of generation quality across varied code generation tasks.
- **Technologies:** Python, AWS SageMaker, Hugging Face, LangChain, OpenAI API, TypeScript

Amazon Seattle, WA (Remote)

Software Development Engineer Intern *May 2022 – Aug 2022*

- Built event-driven infrastructure for the customer-facing notification hub in the Amazon Alexa Developer Console, onboarding and coordinating independent internal teams onto the platform.
- **Technologies:** TypeScript, AWS (CDK, Lambda, EventBridge)

Georgia Tech Research | Dr. Jennifer Kim Atlanta, GA

Researcher & Developer *Aug 2022 – Dec 2022 | Jan 2024 – May 2024*

- Developed a fine-tuned RAG model to automate conversion of standard college-level course materials into personalized formats for individuals with cognitive disabilities, targeting a core scalability bottleneck in Georgia Tech's Excel program.
- Addressed a 1:1 support model bottleneck- combining textbook retrieval with individual student profile context to generate adapted assignments, with the goal of increasing program enrollment capacity.
- **Technologies:** LangChain, Python, Pandas, NumPy, Vue

Projects

Smart Chess AI | *TensorFlow, NumPy, Pandas* Aug 2021 – Dec 2021

- Developed decision tree and neural network models to classify chess move accuracy using Lichess puzzle data; research report and codebase publicly available on GitHub.

APEC 2020 App Challenge | *React, Python, Flask* | **3rd Place (International)** Oct 2020

- First US team to podium in the international APEC App Challenge; built Octodash, a smart inventory management web app with a custom news aggregation algorithm.
